

Case Study

SAFe Transformation & Enterprise Portfolio Management for a KSA Technology R&D Company

Client Name	KSA Technology R&D Company (anonymized)
Client Industry	Technology / R&D
Region	Saudi Arabia (KSA)
Services Provided	SAFe Transformation, Agile Coaching & Training, Work Mgmt, Knowledge Mgmt, Enterprise Portfolio Mgmt
Engagement	Full-scale SAFe adoption + integrated Atlassian stack

PAIN POINT / PROBLEM

The organization needed to scale agile practices across the enterprise but lacked the internal awareness, roles, processes, and tooling to do so. Leadership had limited visibility into running activities, and there was no mechanism binding team-level progress to the company's strategic themes and objectives.

OUR PROPOSED SOLUTION

VIDSCOLA led a full SAFe transformation, building internal agile capability across all roles and levels, then implemented an integrated Atlassian stack: work management and knowledge management licenses at team level, connected to an enterprise strategy and portfolio management license at the organizational level — one of the first such enterprise-scale deployments in the Kingdom. Team structures, processes, and workflows were fully adapted to maximize the platform's business value.

SOLUTION IMPACT

- Reduced time-to-market for key initiatives by approximately 25% through scaled agile delivery.
- Connected 100% of team-level work to strategic themes and objectives for full leadership visibility.
- Cut portfolio planning and prioritization cycles by around 45% with structured PI planning.
- Built sustainable internal agile capability across leadership and delivery teams.
